A Modern View of QC Automation

RMBNucleus™ 4.0

- **SCALABLE** Central Manager Multi-System Administrator
- **SECURE** support of Windows 10 and SQL Server 2019
- **FLEXIBLE** web-based LIMS data transfer
- **UPGRADED** reporting and auditing for 21 CFR 11 compliance
- **STREAMLINED** recovery, monitoring and user operation

LIMS Connectivity

New web-based LIMS connectivity and upgraded remote monitoring increase your flexibility while reducing potential for error.

Whether your lab has a single Growth Direct® System or multiple units, RMBNucleus™ offers at-a-glance transparency without the need for direct physical access. Convenient dashboards allow you to add users for multiple instruments in a single step, see which samples are in each unit for optimal cassette handling, or reset local passwords with one-and-done efficiency. In addition, customizable reporting options make it easier to pre-extract needed information in the format that best supports your data integrity requirements. So, you can evolve the Growth Direct® System you have today into the future-proof QC ecosystem you'll need tomorrow.

Taking the Growth Direct® System to a Higher Level of Integration

Coordinate multiple instruments, remotely viewing orders and alerts for individual units

Manage roles, status, and access for hundreds of system users as needed

Monitor thousands of samples in real time, with more efficient recovery and cassette handling
